

Aim: Setting up of Git Client

Theory:

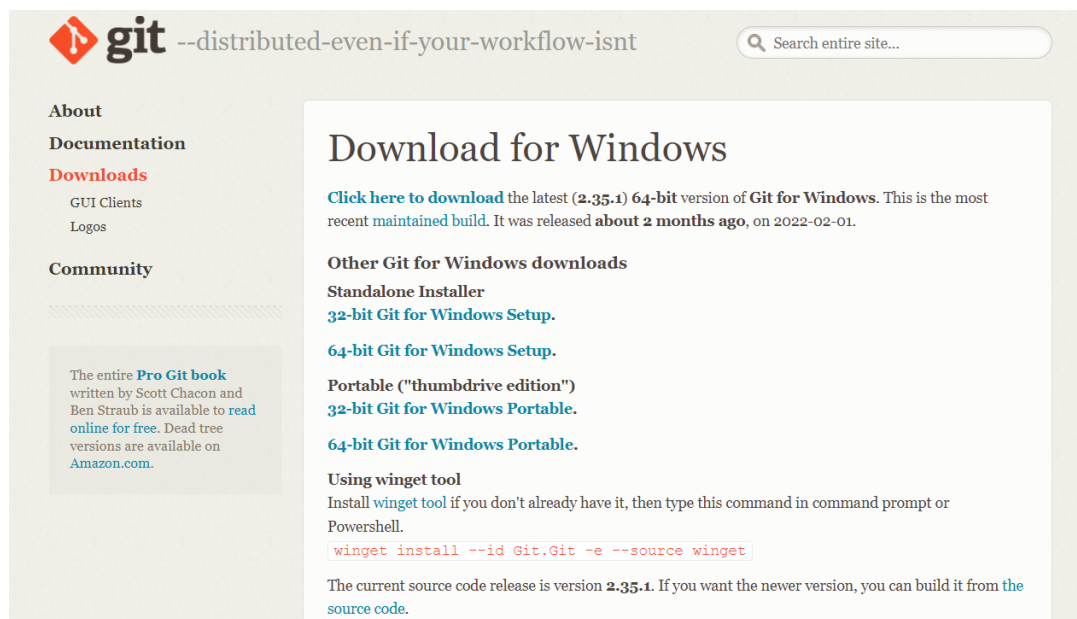

GIT → It is basically used for pushing and pulling of code. We can use git and git-hub parallelly to work with multiple members or individually. We can make , edit , recreate ,copy or download any code on git hub using git.

What is GIT ? → It's a Version Control System(VCS) → It is a software or we can say a server by which we are able to track all the previous changes in the code.

Advantages of GIT →

Procedure: We can install Git on Windows, using the most official build which is available for download on the GIT's official website or by just typing (s c m git) on any search engine . We can go on <https://git-scm.com/download/win> and can select the platform and bit-version to download. And after clicking on your desired bit-version or ios it will start downloading automatically.

Snapshots of download:

Name	Date modified	Type	Size
 Git Bash	16-03-2022 08:51	Shortcut	2 KB
 Git CMD	16-03-2022 08:51	Shortcut	2 KB
 Git FAQs (Frequently Asked Questions)	16-03-2022 08:51	Internet Shortcut	1 KB
 Git GUI	16-03-2022 08:51	Shortcut	2 KB
 Git Release Notes	16-03-2022 08:51	Shortcut	2 KB

Aim: Setting up GitHub Account

Theory:

What is GitHub -> GitHub is a website and cloud-based service (client) that helps an individual or a developers to store and manage their code. We can also track as well as control changes to our or public code.

Advantages of GitHub -> GitHub's has a user-friendly interface and is easy to use .We can connect the git-hub and git but using some commands shown below in figure 001. Without GitHub we cannot use Git because it generally requires a host and if we are working for a project we need to share it with our team members, which can only be done by making a repository . Additionally , anyone can sign up and host a public code repository for free, which makes GitHub especially popular with open-source projects.

Procedure:-

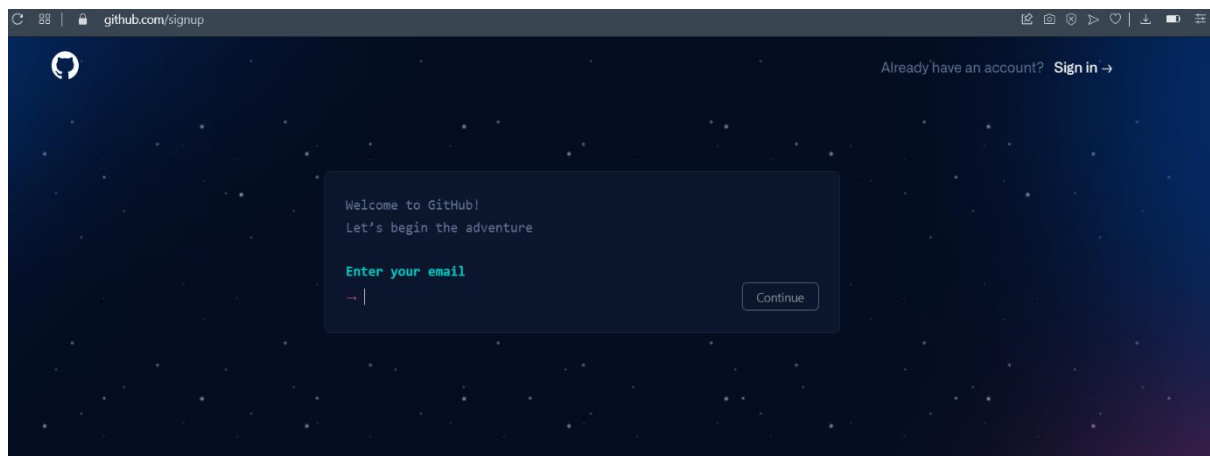

Step1 :-

Google (any search engine)

Search for git-hub or (<https://github.com/signup>).

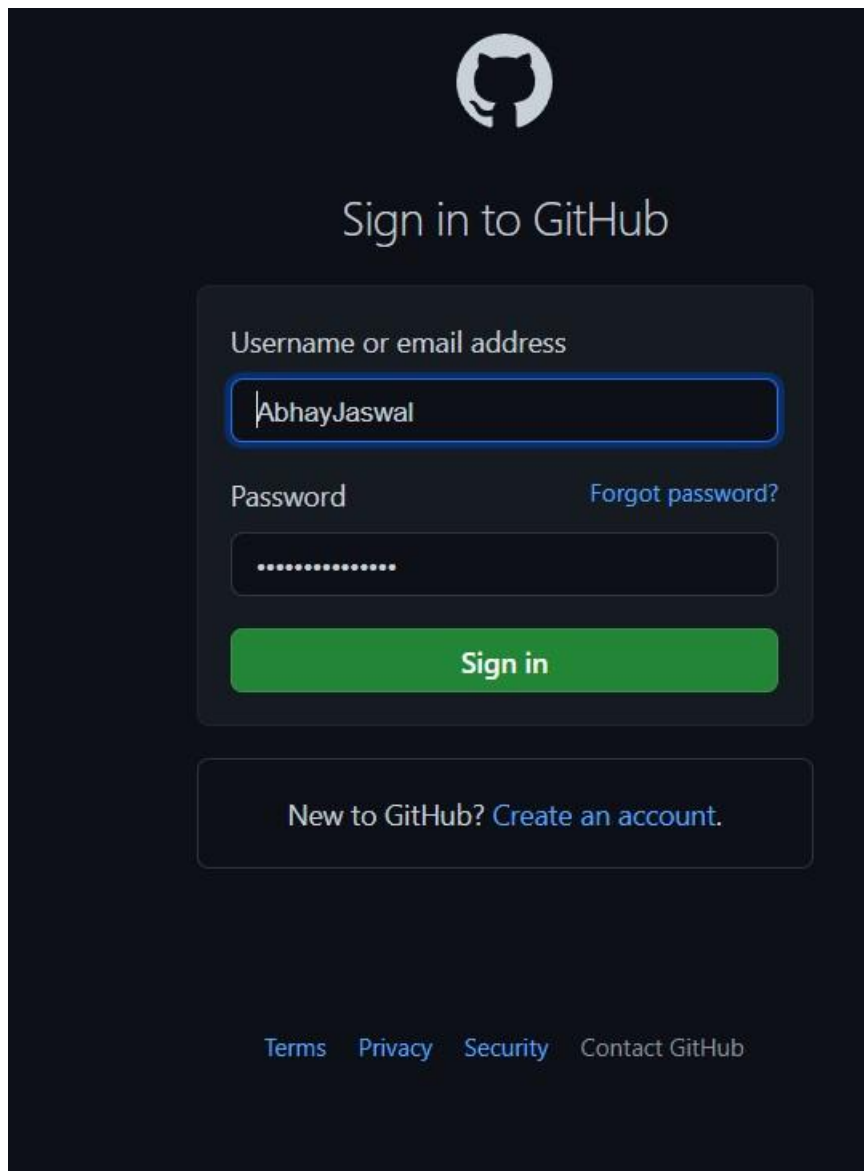

Step2 :-

Snapshots –

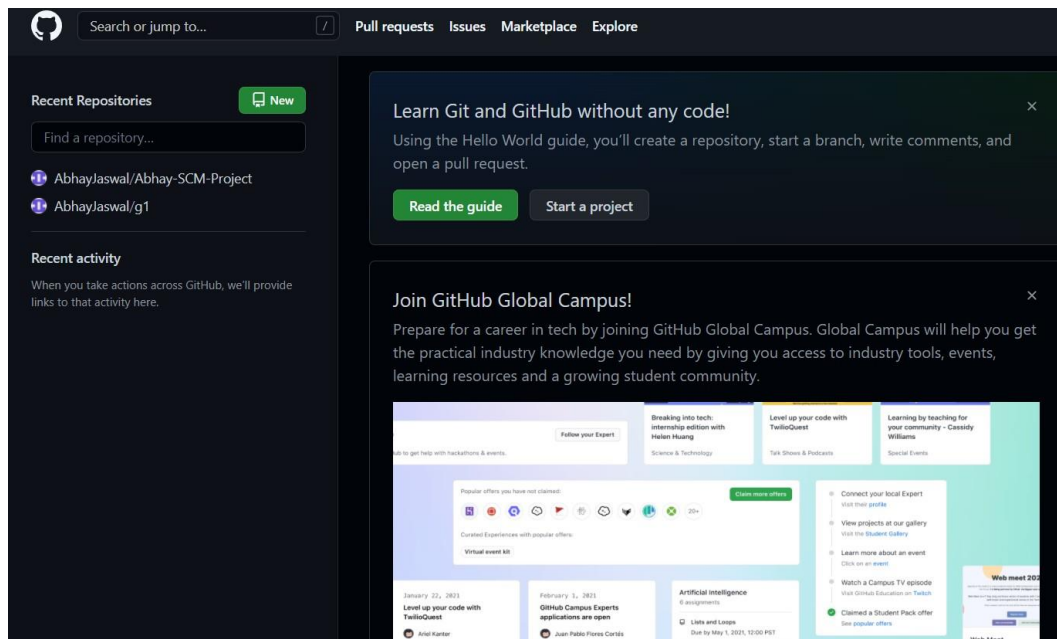

After visiting the link this type of interface will appear, if you already have account you can sign in and if not you can create.

Sign in into GIT-HUB :-

The image shows the GitHub sign-in page with a dark theme. At the top center is the GitHub Octocat logo. Below it, the text "Sign in to GitHub" is displayed. The main form area contains two input fields: "Username or email address" with the text "AbhayJaswal" and "Password" with masked characters. A "Forgot password?" link is next to the password field. A green "Sign in" button is below the fields. At the bottom of the form, it says "New to GitHub? [Create an account.](#)". At the very bottom of the page, there are links for "Terms", "Privacy", "Security", and "Contact GitHub".

Interface of GitHub :-

To link GitHub account with Git bash –

For username:-

git config --global user.name "username in git-hub"

For user email:-

git config --global user.email "your email in git-hub"

To verify:-

git config user.name

git config user.email

Snapshot :-

```

MINGW64:/c/Users/sahil/Desktop/SCM G1

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (main)
$ git config --global user.email "abhay0035.be21@chitkara.edu.in"

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (main)
$ git config user.name
AbhayJaswal

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (main)
$

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git config user.email
abhay0035.be21@chitkara.edu.in

```

Aim: Program to Generate log

Theory:-

Logs -> Logs are nothing but the history which we can see in git by using the code git log. It contains all the past commits, insertions and deletions in it which we can see any time.

Why logs -> Logs helps to check that what were the changes in the code or any other file and by whom. It also contains the number of insertions and deletions including at which time it was changed.

Snapshots –

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git log
commit 95da84b85b42b3d3d41f038b13d303a726de8cd6 (HEAD -> master, main)
Merge: ffce2a4 269d926
Author: AbhayJaswal <abhay0035.be21@chitkara.edu.in>
Date:   Wed Apr 13 00:48:46 2022 +0530

    Merge branch 'test'

commit ffce2a43701595b7ae242f45cb546f9842167b19 (test1)
Author: AbhayJaswal <abhay0035.be21@chitkara.edu.in>
Date:   Tue Mar 29 23:07:03 2022 +0530

    no comments

commit 79608f20e16bc77fa12c2fa2ba6e147355982cc3
Author: AbhayJaswal <abhay0035.be21@chitkara.edu.in>
Date:   Tue Mar 29 23:05:39 2022 +0530

    no comments
```

Aim: Create and visualize branches

Create branches :-

The main branch in git is called as master branch. But we can make branches out of this main master branch. All the files present in master can be shown in branch but the file which are created in branch are not shown in master branch. We can also merge both the parent (master) and child (other branches).

Syntax:-

1. For creating a new branch.
git branch name of branch

Snapshots –

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ pwd
/c/Users/sahil/Desktop/SCM G1

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git branch activity1
```

2. We can also check how many branches we have.
git branch

Snapshots :-

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ pwd
/c/Users/sahil/Desktop/SCM G1

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git branch activity1

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git branch
activity1
```

3. To change the present working branch.
git checkout name of branch.

Snapshots –

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git checkout activity1
Switched to branch 'activity1'
```

Visualizing branches :-

To visualize I have created a new file in a new branch activity 1 instead of master branch.

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git branch
  activity1
  activity2
  checkout
  main
* master
  test
  test1

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (master)
$ git checkout activity1
Switched to branch 'activity1'
D      brrrr.txt
D      hello.txt
D      notop.txt
D      testop.txt

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/SCM G1 (activity1)
$
```

After this I have done the 3 step architecture which is tracking the file , send it to staging area and finally we can role back to any previously saved version of this file.

In this way we can create and change different branches . We can also merge the branches by using `git merge` command.

Aim: Git lifecycle description

Theory:

Stages in GIT Life Cycle -> Files in a Git project have various stages like Creation, Modification, Refactoring, and Deletion and so on. Irrespective of whether this project is tracked by Git or not, these phases are still prevalent. However, when a project is under Git version control system, they are present in three major Git states in addition to these basic ones. Here are the three Git states:

- Working directory
- Staging area
- Git directory

Working Directory ->

Consider a project residing in your local system. This project may or may not be tracked by Git. In either case, this project directory is called your Working directory.

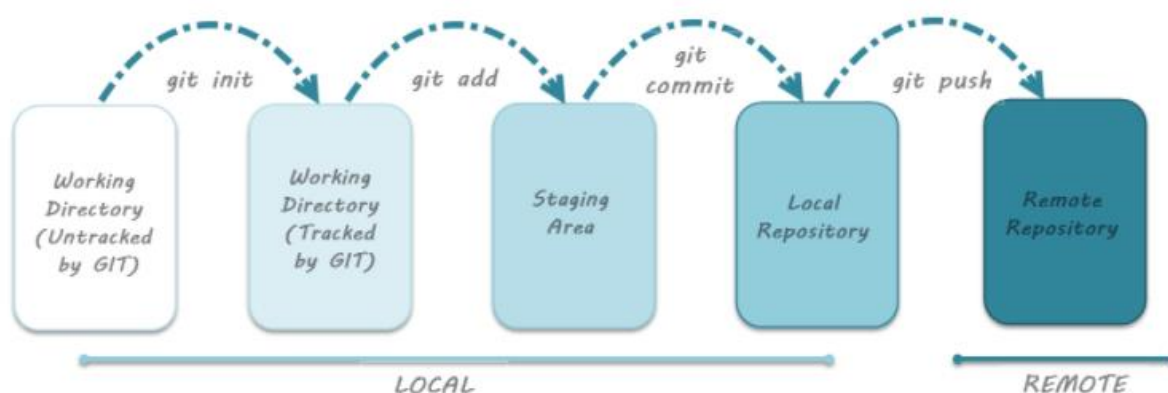

Staging Area ->

Staging area is the playground where you group, add and organize the files to be committed to Git for tracking their versions.

Git Directory ->

Now that the files to be committed are grouped and ready in the staging area, we can commit these files. So, we commit this group of files along with a commit message explaining what is the commit about. Apart from commit message, this step also records the author and time of the commit. Now, a snapshot of the files in the commit is recorded by Git. The information related to this commit is stored in the Git directory.

Remote Repository-> means mirror or clone of the local Git repository in GitHub. And pushing means uploading the commits from local Git repository to remote repository hosted in GitHub.

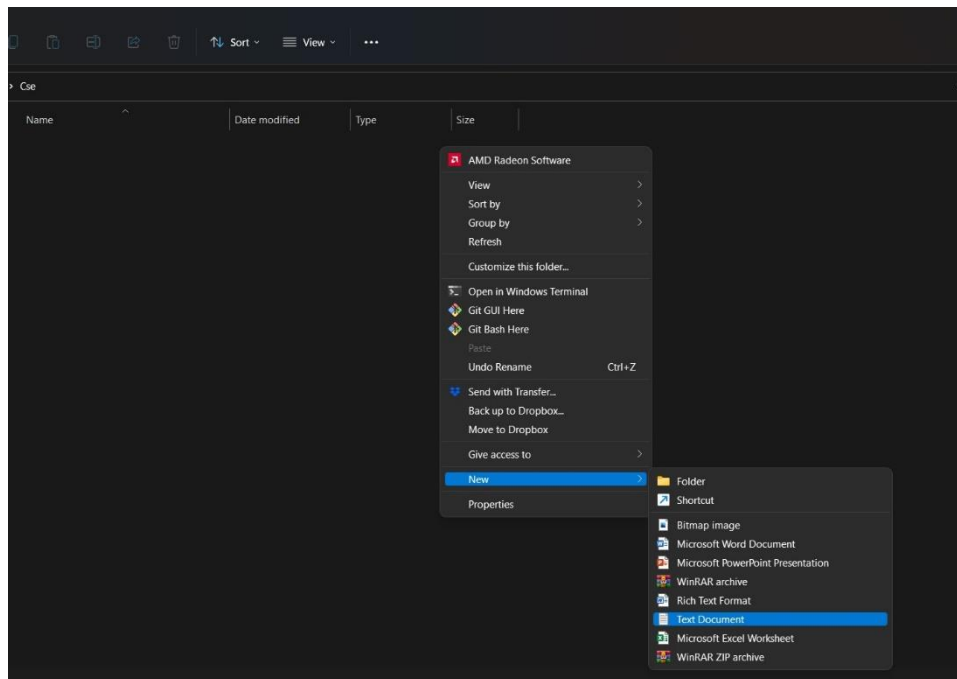

Snapshots –

```
MINGW64:/c/Users/sahil/Desktop/Cse

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse
$ git status
fatal: not a git repository (or any of the parent directories): .git

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse
$ |
```

File	to	to	Folder	History	Invert selection
d	Organize	New	Open	Select	
khg					
Name	Date modified	Type	Size		
git	27-03-2022 14:16	Text Document	0 KB		

```

MINGW64:/c/Users/sahil/Desktop/Cse

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse
$ ls
git.txt

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse
$ git status
fatal: not a git repository (or any of the parent directories): .git

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse
$ git init
Initialized empty Git repository in C:/Users/sahil/Desktop/Cse/.git/

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    git.txt

nothing added to commit but untracked files present (use "git add" to track)

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ |

```

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git add --a

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
        new file:   git.txt

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ |
```

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git commit -m "new file added git.txt"
[master (root-commit) 63287c1] new file added git.txt
1 file changed, 0 insertions(+), 0 deletions(-)
create mode 100644 git.txt

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ |
```

```
Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
$ git status
On branch master
nothing to commit, working tree clean

Abhay Jaswal@LAPTOP-7DOQCJEN MINGW64 ~/Desktop/Cse (master)
